

2023-2024

Deadliest Animals vs. Deadliest Diseases

Between 2023 and 2024, an estimated 1,177,850 deaths worldwide were caused by animals, while the United States recorded approximately 2,191,658 deaths resulting from health-related conditions. Above are the top five animal-related causes of death and the top five leading health-related causes.

Fun take aways:

- The amount of deaths caused by insects roughly equals the amount of deaths caused by Cancers and Organ Ailments.
- Chronic Diseases account for more than half of deaths of the health related deaths.
- For ever death caused by an Animal/Insect equals roughly 2 human deaths.
